Output 4.XXV to 5.XXV
at 3A with XX Vripple
Notes
-- This board draws XX amps on average and
XX amps peak. Suggested 5A fused for this board.
-- Injectors should have disconnect switches \ relays
and fuses as required.
-- HI/LO driver should be limited to 1/8 amps or
less unless they can be kept cold enough.
-- If you wire CAM or CRANK for Hall input, the -
input will float to 2.5V. Then the + will trigger
when crossing 2.5V.
-- Analog inputs can be configured via installing
pull up and pull down resistors.
-- Just because we're dumb asses, doesn't mean
you can be one too. Don't try the crazy sh*t
we do at home, or anywhere else that people
can get hurt.
-- This is not for applications with emissions
or safety regulations (AKA not for street use)
This is for Closed stages, track and equipment.
