PROTO AREA

CONN_BX2 P24, P25, P26, P7, P8, P14

These two jumpers are here to accommodate stm32f4discovery

These four jumpers are test points

That's alternative signal OUTPUT - these traces should be routable to PC6 and PA5 via jumpers. Alternative to W212 and W212 routing of op-amps ch 11 and ch 12

CRANK TEST2 CAM

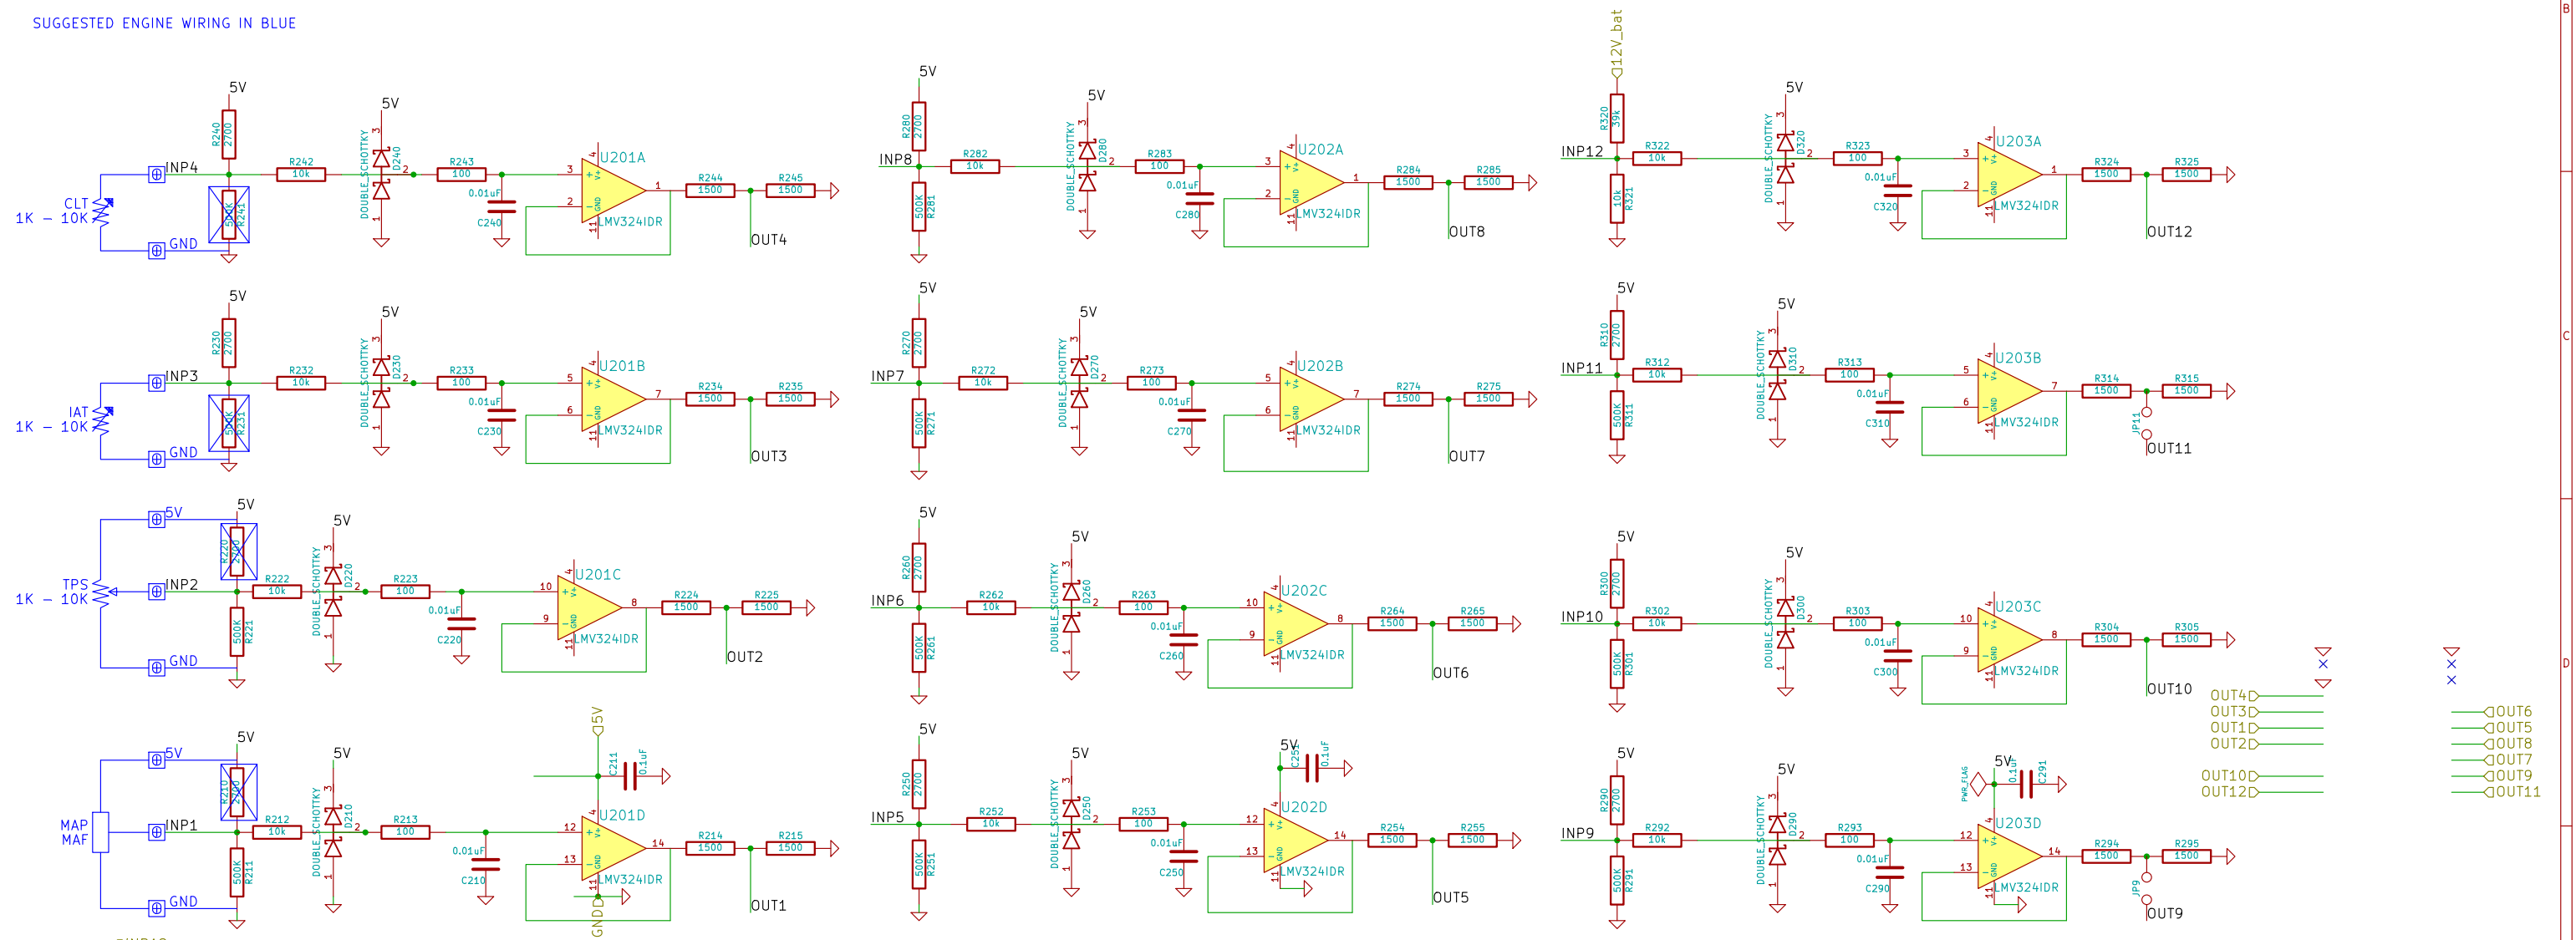

The JP1 jumper is needed because we cannot feed the screen via USB - we would need to disconnect it while the board is on a bench

 also suitable for fuel pump relay, IAC solenoid etc

MISC NOTES

THE GENERAL SYSTEM LAYOUT IS SHOWN IN BLUE. THIS IS NOT THE SUGGESTED SYSTEM WIRING, IT DOES SHOW THE GENERAL OVERALL CIRCUIT LAYOUT TOPOLOGY.

THE PCB WIRING IS SHOWN IN RED, GREEN WITH A BLUE BUS.

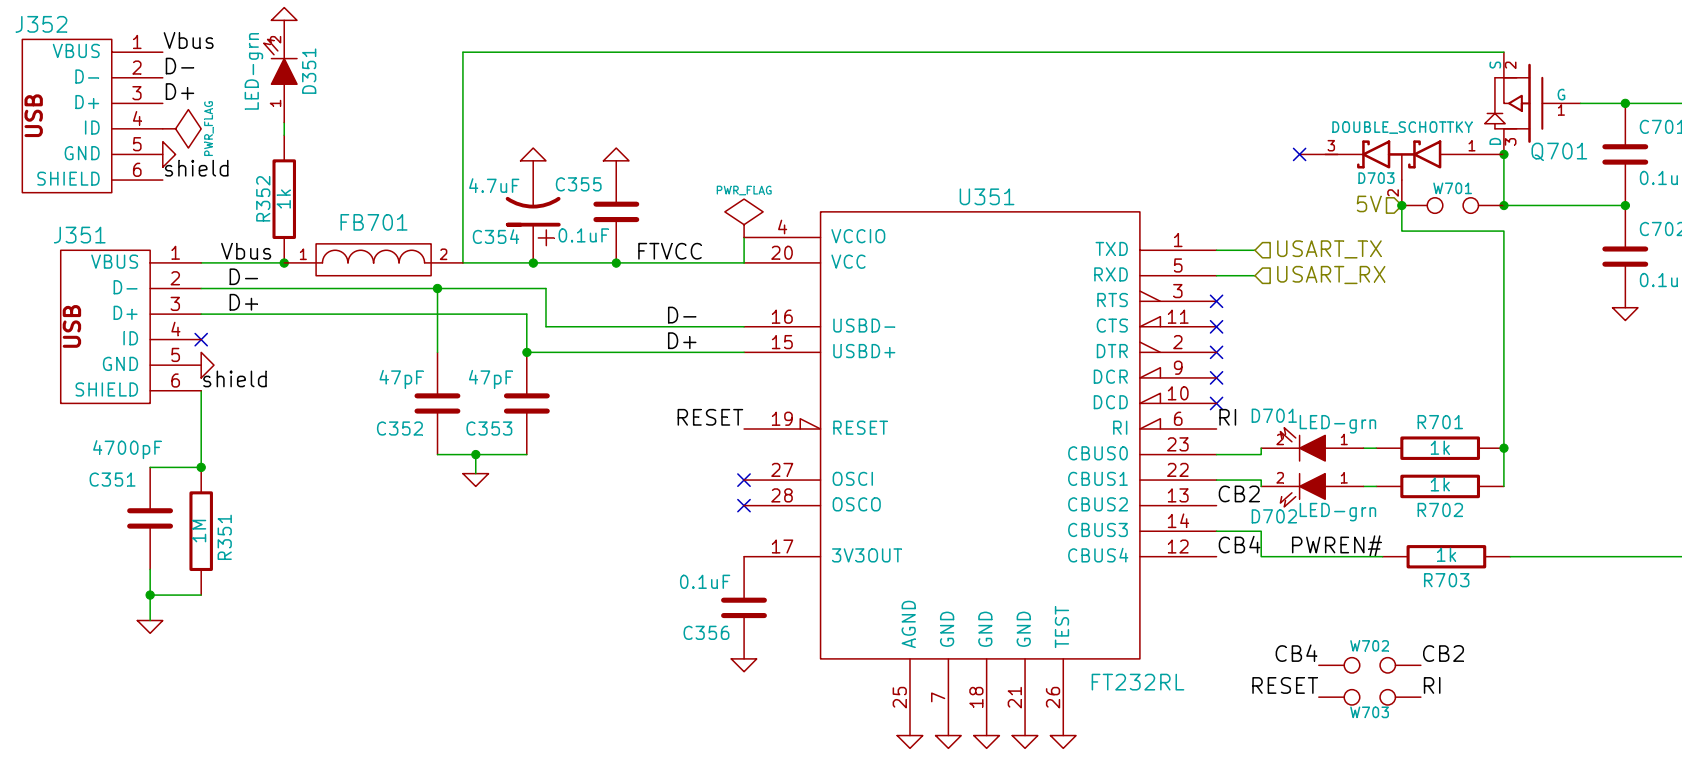

Screw terminals 1760500000

W1002,W1003 are for hall's that need a pull up. Check your hall sensors, many will want closer to 470 ohm. The 1k is a generic value.
<http://www.cherrycorp.com/english/sensors/pdf/connection.pdf>

The resistors across pins 9,10 and 15,16 are not typically installed, they are only used on really hot VR signals, to dampen the signal.

Care must be taken with the conector
chosen for the TCPL to avoid inaccuracies.
Also, the connector must be as close as
possible to the cold-junction compensation.

We want a big mass of copper in the
TCPL joints, to dampen the cold junction
temperature and to make it more measurable
with this IC
